Current Headline

The Performance Intelligence Platform
Built for Leadership Coaches

Suggested Update

Performance Intelligence for Coaching
Built for Leadership Coaches

Reason

“Platform” leans slightly toward tech infrastructure.
“for Coaching” reinforces PrescribeLife.AI as an interpretation layer, not just a tool.

Current Subheading

Powered by Resilience Data and Behavioral Change

Suggested Update

Guided by Long-Term Resilience Trends and Behavioural Insight.

Reason

Important compliance shift:

PrescribeLife.AI does not generate resilience data itself.
It interprets behavioural signals.

Current Body Paragraph

PrescribeLife.AI gives leadership coaches clear visibility into what's driving performance between sessions, turning recovery, capacity, and resilience signals into performance intelligence – so you can deliver better client outcomes and clearly demonstrate the value of your coaching.

Suggested Replacement

PrescribeLife.AI helps coaches identify behavioural patterns that influence performance capacity between sessions, translating long-term trends into actionable coaching insight. This supports more intentional, high-impact coaching conversations.

Leadership performance doesn't break overnight – it declines long before it becomes visible. PrescribeLife.AI makes these changes visible early, turning recovery, capacity, and resilience signals into clear performance intelligence for coaches.

85% of coaches
report growing demand for support around sustaining performance and resilience

80% of professionals
are at risk of burnout.

PrescribeLife.AI
was built to help you meet this urgent need head-on

Our Founding Thesis

Built by a team of doctors, neuroscientists, and ICF-accredited resilience coaches, we believe the future of coaching is adaptive, personalized, and always-on.

Here's what we mean

Leadership Performance / Founding Thesis Section

Top Statement Paragraph

Current

Leadership performance doesn't break overnight – it declines long before it becomes visible. PrescribeLife.AI makes these changes visible early, turning recovery, capacity, and resilience signals into clear performance intelligence for coaches.

Suggested Replacement

Leadership performance rarely shifts overnight. Changes in behaviour, recovery, and capacity evolve over time. PrescribeLife.AI helps coaches identify these patterns early, translating them into coaching insight that supports performance capacity.

Reason

“makes these changes visible” sounds diagnostic.

“signals” sounds clinical.

Stats Card (Left)

Current

85% of coaches report growing demand for support around sustaining performance and resilience

80% of professionals are at risk of burnout.

Suggested Adjustment

85% of coaches report growing demand for support around sustaining performance and resilience.

80% of professionals report experiencing rising pressure linked to burnout.

Reason

“A risk of burnout” can sound clinical or medical depending on context.

Small wording shift keeps impact while staying safer.

Right Gradient Card

Current

PrescribeLife.AI

was built to help you meet this urgent need head-on

Suggested Update

PrescribeLife.AI

helps coaches identify how behavioural patterns influence performance capacity between sessions.

Reason

Adds behavioural science layer inspired by Sahha.

Removes vague marketing language.

“Our Founding Thesis” Section

Current Paragraph

Built by a team of doctors, neuroscientists, and ICF-accredited resilience coaches, we believe the future of coaching is adaptive, personalized, and always-on.

Suggested Replacement

Built by a team of doctors, neuroscientists, and ICF-accredited resilience coaches, PrescribeLife.AI is designed to support more adaptive and personalised coaching. By translating long-term behavioural patterns into actionable insight, coaches can guide change with greater clarity and support performance capacity between sessions.

Capability Cards + Platform Section

Card 1

Current

Extend impact beyond sessions with always-on support.

Suggested Update

Extend impact beyond sessions with insight into behavioural patterns that influence performance between conversations.

Reason

“always-on support” can sound like monitoring or surveillance.

“insight between conversations” reinforces coaching context.

Card 2

Current

Adopt a holistic lens
integrating cognitive, emotional, behavioral, and physiological factors to unlock sustained performance.

Suggested Update

Connect behavioural, emotional, and recovery patterns to understand what shapes performance capacity.

Reason

Removes heavy physiological language while keeping depth.

Aligns with Sahha behavioural science framing.

Card 3

Current

Adapt in real time
each client's evolving needs and resilience stage.

Suggested Update

Adapt over time as behavioural patterns and resilience evolve across the coaching journey.

Reason

Shift away from “real-time” tracking language toward longitudinal insight.

Card 4

Current

Personalize every strategy
because no two people thrive the same way.

Suggested Update

Personalize every strategy

using behavioural patterns to guide coaching decisions that support performance capacity.

Reason

Subtle reinforcement of trend-based positioning.

Platform Section Title

The PrescribeLife.AI Platform

Micro line under title

Built on behavioural science to support long-term coaching insight.

Platform Paragraph

Current

Resilience coaching that adapts in real time to evolving client needs, powered by behavioral science and biometric precision, because burnout should not be the cost of performance.

Suggested Replacement

PrescribeLife.AI interprets behavioural patterns and translates them into coaching insight, enabling resilience-focused coaching that evolves alongside each client's journey. It supports performance capacity across recovery, decision-making, and sustained output.

Reason

Removes:

"biometric precision" which can sound clinical or diagnostic.

How PrescribeLife.AI Works Section

Card 01

Current Title

Personalized Behavioral Change System

Suggested Update

Behavioural Patterns Over Time

Current Body Copy

Facilitates self-awareness, better decision-making, and adaptive strategies to help your clients drive measurable resilience and performance gains — aligned with your unique coaching style.

Suggested Replacement

Highlights behavioural patterns across sleep, activity, and recovery, helping coaches identify shifts that influence performance capacity over time.

Reason

Removes “measurable resilience gains” which sounds outcome-driven or clinical.
Aligns with Sahha behavioural signal framing.

Card 02

Current Title

Biometric Data + Habitual Insights

Suggested Update

Behavioural Signals & Patterns

Current Body Copy

Captures real-time physiological and emotional resilience markers, tracking trends across sleep, readiness, activity, and wellbeing—without requiring new hardware.

Suggested Replacement

Brings together behavioural signals across movement, rest, and recovery to highlight patterns that shape performance capacity.

Reason

“physiological markers” and “real-time tracking” sound medical.
This keeps Sahha credibility while staying compliant.

Card 03

Current Title

24/7 Adaptive Coaching Support ([Preslie.AI](#))

Suggested

Coaching Insight Between Sessions (Preslie)

Suggested Updated Body Copy

Preslie interprets behavioural patterns and surfaces coaching insight between sessions, helping coaches identify emerging shifts that influence performance capacity.

“Who is Preslie?” Box

Current

tracks resilience patterns, flags early warning signs

Suggested Replacement

Interprets behavioural patterns and surfaces coaching insight that supports performance between sessions.

Replace Bottom Line

Current

This evidence-based system gives you continuous visibility into a client's mental, physical, and emotional resilience profile.

Suggested Replacement

Provides a clear view of evolving behavioural patterns to support more informed coaching decisions and performance capacity over time.

Reason

Removes diagnostic tone.

Right Side Benefit Cards

Current

Spot stress and recovery patterns before they escalate.

Suggested Replacement

Identify shifts in stress and recovery patterns that influence performance capacity over time.

Current

Adapt strategies to each client's current resilience stage.

Suggested Replacement

Adjust coaching strategies based on behavioural patterns to support performance capacity over time.

Keep:

Scale personalization without adding manual workload.

This line is strong.

Strategic Summary

This section benefits from reframing real-time biometric language into long-term behavioural insight terminology. Suggested changes maintain Sahha credibility while positioning

PrescribeLife.AI as a coaching intelligence layer rather than a monitoring or tracking platform.

Daily Support / App Experience Section

Main Headline

Current

Personalized daily support that keeps clients engaged and making progress.

Suggested Update

Daily support that reinforces coaching priorities between sessions..

Preslie supports reflection and habit awareness, helping clients recognise behavioural patterns and stay aligned with coaching priorities that support performance capacity.

Reason

“making progress” feels generic and app-like.

“Sustainable momentum between sessions” anchors it back into coaching.

Column 1

Current

Build awareness
Self-Assess Resilience Drivers

Suggested Update

Build Awareness

Recognise behavioural patterns that shape resilience and performance capacity.

Reason

Keeps language consistent with behavioural trend framing.

Column 2**Current**

Commit to action
Track & unblock follow through

Suggested Update**Current**

Commit to action
Track & unblock follow through

Suggested Update

Commit to action
Strengthen habits through guided behavioural insight.

Reason

“Track” leans toward monitoring.

Column 3**Current**

Stay Engaged
Share reflections & get personalized performance tips

Suggested Update

Stay Engaged

Reflect on behavioural patterns and receive coaching insight that supports performance capacity between sessions.

Reason

Removes “performance tips,” which can feel generic or consumer-app oriented.

Mobile App / Health Trends Section

Main Headline

Current

Mobile App captures Biometric Insights & Key Resilience Indicators

Suggested Replacement

Behavioural Patterns & Resilience Trends Shaping Performance

Reason

“captures biometric insights” implies medical-grade measurement.

Micro Line

Current

No extra hardware needed – integrates with major wearables

Suggested Update

No extra hardware needed — integrates seamlessly with the devices your clients already use.

Reason

Keeps credibility without sounding like a hardware replacement.

Body Paragraph

Current

Resilience coaching that adapts in real time to evolving client needs, powered by behavioral science and biometric precision—because burnout should not be the cost of performance.

Suggested Replacement

Resilience-focused coaching that evolves alongside each client's journey. PrescribeLife.AI translates behavioural patterns into actionable insight, helping coaches understand what shapes performance capacity across recovery, movement, and daily habits..

Reason

Removes:
real-time adaptation
biometric precision

Adds:
long-term trend interpretation
behavioural framing

Your Coaching Portal Section

Section Title

Current

Your Coaching Portal

Recommendation:
Keep as is.

This is clear and coach-focused.

Subheading

Current

A 360° view of every client’s resilience and communication in one place.

Suggested Update

A connected view of behavioural patterns, resilience trends, and communication to support more informed coaching decisions and performance capacity.

Reason

- “360° view” can imply comprehensive monitoring.
- “Connected view” aligns better with coaching interpretation.

Card 1

Current

AI-powered insights help you spark deeper coaching conversations.

Suggested Update

Prescribe behavioural patterns to support more informed coaching conversations that influence performance capacity.

Reason

Small shift toward behavioural insight language.

Card 2

Current

Send client updates, assignments, and messages directly inside the portal.

Recommendation:

Keep wording as is.

This is functional and compliant.

Card 3

Current

Walk into every session with real-time insights on your client's goals, habitual insights, and biometric data

Suggested Replacement

Walk into every session with insight from behavioural patterns, client reflections, and coaching priorities that support performance capacity.

Reason

Removes:

real-time insights

biometric data

Adds:

long-term trend positioning.

Testimonials / Social Proof Section

Section Headline

Current

Trusted by Performance Coaches Behind Today's Most Influential Leaders

Suggested Update

Trusted by Performance Coaches Supporting High-Performing Leaders and Teams

Reason

"Behind" can sound slightly hierarchical or indirect.

"Supporting" reinforces coaching partnership and aligns with tone across the site.

Testimonial Cards

Recommendation:

Keep testimonials exactly as they are.

Request a Demo Call

PrescribeLife.AI is simple to set up for 1–1, group or team coaching.

Invite Your Client

They download the PrescribeLife.AI app and connect their existing wearables in minutes.

No extra hardware, no tech headaches.

01

Coach with Confidence

Walk into every session already knowing where to focus.

Use data-informed topics to guide powerful conversations, prevent burnout, and create breakthroughs.

02

Uncover Hidden Patterns

We translate real-time biometric and behavioral data into simple, actionable insights.

See readiness, recovery, and resilience patterns instantly.

03

Built on 8M+ days of behavioral data and 50K+ validated assessment models.

We combine behavioral science and biometric data to measure what truly drives resilience and performance – powered by trusted integrations like Garmin, Apple Health, Google Fit, and more.

Powered by

Clinical assessments training models

Setup Flow + Credibility Section

Main Heading

Current

PrescribeLife.AI is simple to set up for 1–1, group or team coaching.

Recommendation:

Keep wording as is.

Step 01

Current

Invite Your Client

They download the PrescribeLife.AI app and connect their existing wearables in minutes.
No extra hardware, no tech headaches.

Suggested Update

Invite Your Client

Clients connect the devices they already use and begin engaging with behavioural insights within minutes, without changing their routine.

No extra hardware required.

Reason

Keeps simplicity while aligning with behavioural framing.

Step 02

Current

Coach with Confidence

Walk into every session already knowing where to focus.
Use data-informed topics to guide powerful conversations, prevent burnout, and create breakthroughs.

Suggested Replacement

Coach with Confidence

Walk into every session knowing where to focus, with insight from behavioural patterns.

Guide more intentional coaching conversations that support performance capacity over time.

Reason

Removes “prevent burnout” phrasing which can feel clinical or outcome-guaranteed.

Step 03

Current

Uncover Hidden Patterns

We translate real-time biometric and behavioral data into simple, actionable insights.
See readiness, recovery, and resilience patterns instantly.

Suggested Replacement

Identify Patterns That Influence Performance

PrescribeLife.AI highlights behavioural patterns across recovery, activity, and energy patterns, helping coaches identify shifts that influence performance capacity over time.

Reason

Removes:

real-time

biometric

instant claims

Aligns fully with Sahha positioning.

Credibility Statement

Current

Built on 8M+ days of behavioral data and 50K+ validated assessment models.

Suggested Update

Built on 20M+ days of behavioural data and hundreds of validated assessment models.

Reason

Avoids language that could imply clinical validation or regulated assessments.

Supporting Paragraph

Current

We combine behavioral science and biometric data to measure what truly drives resilience and performance.

Suggested Replacement

We combine behavioural science with behavioural signals to understand the patterns that shape resilience and performance capacity over time.

Reason

Removes “measure what truly drives,” which can sound diagnostic.

Metrics Row (8M+, 500K+, 50K+)

Recommendation:

Keep numbers but soften labels slightly if possible:

20M+

Days of behavioural data

500+

Insights & metrics available

100K+

Data points analysed per user per month

The slide features a dark background with white and pink text. At the top, a headline reads 'Meet the rising demand for resilience-focused coaching and expand your impact.' Below this, a large white circle contains the text 'Amplify your Impact & Grow Your Practice.' and a pink button labeled 'Book a Personalized Demo Call'. Underneath the circle, it states 'Projected potential ROI of 5x to 10x minimum'. To the right of the circle are two rounded rectangular boxes: the top one says 'Instantly add high-value, data-driven programs.' and the bottom one says 'Confidently introduce premium revenue streams.' Below these, there are three icons: a box labeled 'Built by Doctors & Scientists' next to '8M+ days of biometric data' and '500k+ clinical assessments', and a shield icon labeled 'HIPAA & GDPR Compliant'. The bottom section is titled 'What Other Coaches Are Saying' and contains four testimonial boxes. The first box is partially cut off on the left. The second box features a quote from Emily Chen, Founder & Coach, Canada. The third box features a quote from James Robertson, Resilience Coach, UK. The fourth box features a quote from Isabella Rodriguez, Well-being Consultant, Europe.

Meet the rising demand for resilience-focused coaching and expand your impact.

Amplify your Impact & Grow Your Practice.

Book a Personalized Demo Call

Projected potential ROI of 5x to 10x minimum

Instantly add high-value, data-driven programs.

Confidently introduce premium revenue streams.

Built by Doctors & Scientists

8M+ days of biometric data

500k+ clinical assessments.

HIPAA & GDPR Compliant

What Other Coaches Are Saying

...olving this data and
...selves, we can customise
...path towards health and

"Technology like this, when used well, can truly help us prevent burnout and sustain resilience."

- Emily Chen
Founder & Coach, Canada

"Sometimes we can do as much as we can with mindset and emotional intelligence, but physiology is the missing piece. This platform bridges that gap."

- James Robertson
- Resilience Coach, UK

"This platform is helping us move beyond stress and burnout by using data to truly understand ourselves and our clients."

Isabella Rodriguez
Well-being Consultant, Europe

Demand / Impact / CTA Section

Main Heading

Current

Meet the rising demand for resilience-focused coaching and expand your impact.

Recommendation:

Keep wording as is.

Circle CTA Block

Current

Amplify your Impact & Grow Your Practice.
Book a Personalized Demo Call
Projected potential ROI of 5x to 10x minimum

Suggested Update

Amplify your impact and grow your practice.

Book a Personalized Demo Call

Scale your coaching with clearer insight and increased client retention.

Reason

“5x to 10x ROI minimum” can sound like a guaranteed outcome or financial claim.
Safer to position growth as potential rather than projection.

Side Benefit Cards

Current

Instantly add high-value, data-driven programs.
Confidently introduce premium revenue streams.

Suggested Updates

Introduce high-value coaching programs with data-informed insight.

Expand your offering with scalable services that support performance capacity and client outcomes.

Reason

Removes “instantly” and “revenue stream” language that feels sales-heavy or outcome-promising.

Credibility Badges

Built by Doctors & Scientists
8M+ biometric data / 500K+ clinical assessments
HIPAA & GDPR Compliant

Suggested Adjustment

Built by Doctors & Scientists

20M+ days of behavioural data analysed across recovery, activity, and wellbeing

HIPAA & GDPR Compliant

Reason

Avoid “clinical assessments” wording if possible.
Keeps credibility without sounding diagnostic.

Bottom Testimonials Row

Recommendation:
Keep testimonials unchanged.

FAQs + Footer Section

1. There are so many platforms out there. What makes PrescribeLife.AI different?

Current

We get it. In a world full of “game-changing” tech, skepticism is smart. The difference is, we’re not just another data tracker. We are the only platform that connects your client’s

real-time biometrics, personalized DNA insights, and their daily behaviors into one adaptive system.

Suggested

PrescribeLife.AI is not another habit tracker or coaching dashboard. It connects behavioural patterns, recovery signals, and daily actions into a single performance intelligence layer. It gives you clear visibility into what is changing between sessions so you can guide coaching with precision.

2. What kind of coaches can benefit?

Current

Performance coaches to founders, executives, and leaders — anyone coaching high-performers benefits from PrescribeLife.AI.

Suggested

PrescribeLife.AI is designed for leadership, performance, and resilience focused coaches working with founders, executives, and high performing professionals. It supports 1 to 1, group, and team coaching environments where sustained performance and decision making matter.

3. My clients are incredibly busy executives. Will they actually use this?

Current

That's why we designed PrescribeLife.AI to deliver value even with minimal effort. Passive data from their phone gives you insights into sleep, readiness, and activity levels — no extra work for them.

Suggested

Preslie interprets behavioural signals generated through everyday activity patterns and wearable devices. Most leaders engage briefly, while you retain clear visibility between sessions.

4. Can I use this for group coaching programs?

Current

Yes, it's powerful for group coaching — spot collective trends (e.g. readiness dipped after review) while supporting individuals personally.

Suggested

Yes. PrescribeLife.AI allows you to view collective resilience and engagement trends while still supporting individuals privately. This helps you adjust program direction without adding manual reporting or additional admin.

5. What if my client doesn't have an Apple Watch or Oura ring?

Current

No device? No problem. The platform gathers essential data via smartphones and facial scan tech — no hardware required.

Suggested

No additional hardware is required. PrescribeLife.AI works with commonly used devices, allowing you to gather meaningful insights without changing your client's routine.

6. How does Preslie™ actually work?

Current

Preslie™ acts like your assistant coach — tracking and surfacing key coachable moments, suggesting topics, and flagging burnout early.

Suggested

Preslie supports coaching between sessions by interpreting behavioural patterns and surfacing relevant coaching insight. It does not replace the coach. It strengthens your ability to respond with clarity and timing.

7. I'm a performance coach, not a data scientist. Will I be able to understand this?

Current

Absolutely. Preslie™ (our AI co-pilot) translates data into simple, coach-ready insights so you can focus on guiding clients — not crunching numbers.

Suggested

PrescribeLife.AI translates complex signals into clear, coach-ready insight. You focus on conversations and outcomes, while the platform brings structure and clarity to what is changing between sessions.

8. Is my client's data secure?

Current

Absolutely. All client data is encrypted and private — only you and your client have access.

Suggested

Client data is encrypted, private, and controlled. Only you and your client can access individual information, and insights are presented within a secure coaching environment designed with privacy and ethical practice in mind.

9. Is this just for resilience or wellness?

Current

No. This is about performance under pressure, recovery strategy, and decision-making capacity — far beyond basic wellbeing.

Suggested

While wellbeing and recovery are important signals, PrescribeLife.AI focuses on performance intelligence.

It helps you understand capacity, engagement, and resilience so coaching moves beyond surface-level habits into sustained performance.

10. Will this replace my coaching framework?

Current

Not at all. PrescribeLife.AI amplifies your framework, providing real-time data to tailor your methods — not replace them.

Suggested

PrescribeLife.AI amplifies your existing methodology rather than replacing it.

You remain the strategist and decision maker. The platform simply gives you deeper visibility into evolving client patterns.

11. What kind of data do you track?

Current

We track validated wellness scores across wellbeing, sleep, activity, and readiness — no new hardware needed.

Suggested

PrescribeLife.AI interprets behavioural patterns, recovery signals, and engagement trends to

surface coaching insight.

The focus is not on tracking everything, but on highlighting what is influencing performance and decision-making.

Footer Disclaimer

Current

The current disclaimer area is strong.

Appendix A

Internal Scientific Reference Notes (Sahha Documentation)

This review incorporated internal reference material from Sahha's science and documentation resources to ensure terminology alignment, compliance awareness, and clarity when describing behavioural signals and longitudinal trends.

Important context:

Sahha references were used strictly as internal guidance during drafting.
No Sahha terminology, branding, or technical explanations are included in client-facing website copy.

The goal was to support PrescribeLife.AI's evolution toward:

Longitudinal behavioural trend interpretation
Resilience-focused coaching intelligence
Non-clinical and non-diagnostic language

Sahha Documentation Reviewed (Internal Use Only)

The following materials informed terminology and structure:

Sahha Science Resources

<https://resources.sahha.ai/resources/science/>

Key areas referenced:

Behavioural signal framing
Score component explanations (sleep, activity, readiness, wellbeing)

Explainability principles for health scores
Trend interpretation language

These references helped shape:

How “behavioural signals” are described
Shifting away from biometric or diagnostic wording
Moving from daily score language toward longitudinal pattern interpretation

How Sahha Influenced This Website Review

Sahha content was not used verbatim. Instead, it informed:

Language transitions such as:

real-time biometric tracking → long-term behavioural trends
physiological monitoring → resilience pattern interpretation
data visibility → coaching insight

This aligns with Oli’s direction discussed in the walkthrough transcript regarding incorporating Sahha’s documentation internally while maintaining PrescribeLife.AI’s own voice and positioning.

Forward Direction

As PrescribeLife.AI transitions away from daily score presentation toward longitudinal resilience trends:

Future documentation will rely less on Sahha’s current score explanations and more on internally developed resilience training frameworks and coaching intelligence models.

This appendix exists solely to document internal drafting influences and maintain transparency across the team.
